DETAILED ACTION

CLAIMS PRESENTED

Claims 1-16 are presented.

Response to Arguments

The previous examiner rejected all claims under 35 USC 102.

Applicant argued that the priority date of the 5C reference must be questioned because of the mention of PDI1394L41 A/V link. Applicant argued that this A/V link was not released until the 4th quarter of the year 2000. This is not persuasive because the 5C reference was a white paper; such white papers, by their very nature, often discuss technologies before their release – that is one of the purposes of a white paper.

Applicant also argued (at page 19 of the amendment) that the two transfer modes of the reference is not explicit about their being used for asynchronous or synchronous modes. This is somewhat persuasive. If such modes are not explicitly stated, then the rejection should not have been made under 35 USC 102.

Nevertheless, it was well known to those of the ordinary skill in the art to use both asynchronous and synchronous transfers for the motivation of getting the benefits of both types of transfers without being limited to the benefits of only one type of transfer. Therefore, the rejections should have been under 35 USC 103.

In conclusion, applicant's arguments, with respect to the previous examiner's rejections of claims under 35 USC 102, have been fully considered and are persuasive

Art Unit: 2134

as to the non-novelty but not as to non-obviousness. Therefore, new rejections are made under 35 USC 103.

CLAIM REJECTIONS

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over 5C reference (as cited in the previous Office Action.)

Regarding claim 1, the 5C reference teaches as noted in the previous Office Action.

These passages of the 5C reference do not teach being used for "synchronous" or "synchronous" modes in the sense of the claim.

Nevertheless, it was well known to those of the ordinary skill in the art to use both asynchronous and synchronous transfers for the motivation of getting the benefits of both types of transfers without being limited to the benefits of only one type of transfer.

Hence, it would have been obvious to those of ordinary skill in the art at the time of the claimed invention to modify 5C reference for the motivation noted in the previous paragraphs so as to teach the claimed invention.

Regarding claims 2-14, the 5C reference teaches these features as noted in the previous Office Action.

Regarding claims 15-16, these claims (as noted at page 20 of the applicant's own amendment) are analogous to the other claims. For the reasons noted in the rejections of the other claims, these claims are not patentable.

Conclusion

The art made of record and not relied upon is considered pertinent to applicant's disclosure. The art disclosed general background.
